KRISHNA SHIVHARE

Computer Science Undergraduate • Full-Stack & Blockchain Development

Location: Nagpur, Maharashtra **Email:** [Your Email Address] **Phone:** [Your Phone Number]

LinkedIn: linkedin.com/in/[your-handle] **GitHub:** github.com/[your-handle]

PROFESSIONAL SUMMARY

Undergraduate engineering student at Symbiosis Institute of Technology with a strong technical focus on client-side web engineering, Python-driven applications, and decentralized technologies. Proven competence in creating responsive user interfaces, state management architectures, and cryptographic credential flows. Experienced in applying quantitative concepts in probability and statistics to software logic.

TECHNICAL COMPETENCIES

Programming Languages	Python, JavaScript (ES6+), HTML5, CSS3, SQL
Web & Frontend Systems	DOM Manipulation, Web Storage APIs (Local/Session Storage), Real-Time Validation, Responsive Design, JSON
Emerging Technologies	Blockchain Architecture, Smart Contract Fundamentals, Cryptographic Hashing, Distributed Ledgers
Core Fundamentals & Tools	Data Structures & Algorithms, OOP, Probability & Statistics, Git/GitHub, VS Code

EDUCATION

Symbiosis Institute of Technology (SIT) — Nagpur, Maharashtra Expected Graduation: 2028

Bachelor of Technology (B.Tech) in Computer Science / Engineering

- **Current Standing:** Semester 3 | Active member of university technical groups.
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming (Python), Probability & Statistics, Web Technologies, Database Systems.

KEY PROJECTS

Blockchain-Based Academic Credential Verification Engine Decentralized Systems

Tech Stack: Python, Smart Contracts, Cryptographic Hashing, Web Integration

- Architected a tamper-proof verification prototype designed to issue, store, and audit student credentials using immutable ledger principles.
- Eliminated third-party verification bottlenecks by enabling direct cryptographic hash lookups for rapid validity confirmation.
- Designed administrative workflow schemas enabling university departments to mint credentials while allowing employers one-click verification.

Dynamic Client-Side Application Suite & Validation Framework Web Development

Tech Stack: JavaScript (Vanilla ES6+), HTML5, CSS3, Web Storage API

- Engineered an interactive theme-switching engine leveraging browser `localStorage` and `sessionStorage` for zero-latency UI persistence.
- Built an event-driven form validation pipeline providing instantaneous visual feedback and intercepting invalid submissions before server transmission.
- Implemented dynamic countdown and timing utilities with high-performance DOM manipulation patterns and modular state structures.

LEADERSHIP & ACADEMIC ENGAGEMENTS

Technical Participant & Hackathon Contributor — SIT Nagpur 2024 – Present

- Participated in departmental coding challenges and developer hackathons focusing on algorithmic efficiency and web technologies.
- Collaborated with peer developer teams on sprint-based application prototypes and shared Git version-controlled repositories.
